## DETAILED ACTION

### Claim Rejections

#### 35 U.S.C. § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office Action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the difference between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

- A. Claims 24-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dodds et al. in view of Strack et al., Muller et al., Moldau, Uotila et al., Chen et al., or Masojidek, as cited in the previous Office Action (paper 5, pp. 2-4), and further in view of Smith et al.

The teachings of Dodds et al., Muller et al., Moldau, Uotila et al., Chen et al., and Masojidek are discussed in the previous Office Action. As applicants point out, the previously cited prior art does not provide a correlation between electron mitochondrial electron flow (i.e., respiration) and "agronomic fitness". Smith et al, teaches that dark respiration rate is strongly correlated with plant growth rate (entire document - see, e.g. abstract).

Given the known correlation between respiration and plant growth rate, it would have been obvious for one of ordinary skill in the art to measure mitochondrial electron flow as described previously. One would have been motivated to do so, given the expectation that

resistance to stress factors in vitro would correlate with resistance in the field. Thus, this invention as a whole was clearly prima facie obvious to one of ordinary skill in the art at the time the invention was made.

Applicant's arguments have been considered but are not persuasive in view of the new ground of rejection.

### **Conclusion**

No claims are allowed.

### **Note**

Applicant may want to consider amending the language in claim 24 as it currently appears applicant is suggesting a scientific comparison could be effectively conducted under varying control conditions. More specifically, "similar conditions" are less than adequate in laboratory testing.
